JTech Tip of the Week: Keychain issues

When you change your KU Online ID password, you may be prompted with a keychain notification when you log in. Your three options are:

**Continue Log-in (best option)**
Selecting "Continue Log-in" will provide access to desktop files, however, network and some third-party applications will present dialog warnings because the keychain is locked. Fortunately, the keychain can still be updated using the following method:
1. Open Keychain Access located in Applications > Utilities.
2. From the Edit menu, choose: Change Password for Keychain "login"...
3. Type the previous password, then click OK.
4. If the correct password is entered, a new window appears. Enter the original password again in the Current Password field.
5. In the New Password field, type the password that matches the current account password.
6. Re-enter the newer password in the Verify field, then click OK.

The new password will still need to be entered for other directory services such as email or server mounts.

**Create New Keychain (second best option)**
Selecting "Create New Keychain" will result in the destruction of the original keychain and all
associated passwords. Each password will need to be re-entered. This can cause issues if you don't know associated passwords.

**Update Keychain Password**
*(please don't do this - you will have to enter your old password each time after you log in with your new password)*

Selecting "Update Keychain Password" and entering the previous password to unlock the keychain will result in the OS updating the log-in password accordingly so that services continue to work as expected. Hooray! If email is tied to the same directory credentials or if server volumes are set to mount at log-in (single sign-on excluded).
